

## **Kaznu is my university**

Every graduate, after finishing the 11<sup>th</sup> grade, is faced with the question: which university to enroll in. After a long study of the pros and cons of universities, I chose Alfarabi University, because I was sure that I would get a decent education here.

KazNU is one of the oldest universities, it enjoys authority and respect. It opened on January 15, 1934. It is a leading national university not only in Kazakhstan, but also in Central Asia. According to the results of a study by the international rating agency QS, KazNU entered the top 250 best universities in the world, was also the first to pass state certification and confirmed the right to carry out educational activities in all specialties and levels. The university has 16 faculties, 32 research institutes and centers, a technopark and a military department. I am currently a 1<sup>st</sup> year student at the Faculty of Mechanics and Mathematics, majoring in mathematics and statistics. This faculty is taught by highly professional teachers who have many years of experience in teaching mathematical sciences. In addition, its infrastructure played an important role in choosing a university. The university is located in the city center, and such a mini-town structure is very fascinating, as a separate oasis in the city center. All conditions for full-fledged study and recreation have been created for KazNU students. Students are served free of charge by the city student polyclinic and the medical center of the Kazakh National University. Al-Farabi, nonresident students are provided with places in modern, cozy dormitories. KazNU has a unique Palace of Students, a cinema club, a sports complex, one of the largest libraries with over 2000000 books is located here. Our university is also famous for its active and interesting student life. KazNU also has about 6 student organizations that deal with various thematic areas, ranging from artistic interests to the creation of scientific projects. KazNU provides its students with the opportunity to study abroad.

.In conclusion, I want to say that I am very glad and grateful that I am studying here.

*Әл-Фараби атындағы ҚазҰУ Механика-математика факультеті*

*Актурлық математика мамандығының I курс студенті:*
